Profile

Textile engineering student specializing in technical textiles with a strong focus on sustainability and life cycle assessment. Currently completing a research project comparing environmental impacts of virgin and recycled cotton yarn using LCA methodologies. Interested in sustainable materials, circular textile systems and research contributing to climate-responsible production.

Education

Textile Engineering, Technical Textile Specialty 2022 – 2026
National School of Engineers of Monastir Monastir-Tunisia

Preparatory Program for Engineering Schools 2019 – 2022
Higher School of Science and Technology of Hammam Sousse sousse-Tunisia

Mathematics Baccalaureate 2015 – 2019
Othman Chati High School Sousse-Tunisia
GPA: 3.0 / 4.0

Professional Experience

Internship 09/2025
Carbon Jar Sousse-Tunisia
Worked in a team to conduct LCA of pyrolysis vs. conventional waste management, highlighting best options for climate, energy, and water.

Internship 08/2025
Carbon Jar Sousse-Tunisia
Worked in a team to assess and compare environmental impacts of bio-based (corn stover) vs. fossil-based (succinic anhydride) levulinic acid production to identify the more sustainable pathway.

Final Year Graduation Project 02/2025 – 06/2025
SITEX Sousse
Demonstrated through LCA that M2 Open-End yarn (50% virgin cotton, 50% recycled fiber) significantly reduces environmental impacts compared to conventional blends.

Internship 07/2024
Zodiac Nautic Sousse-Tunisia
Implemented 5S in a boat shaping workshop, improving organization by 30%, cleanliness by 25%, and efficiency by 20%, and proposed sustainable shelving solutions.

Internship 2023

Covet Sousse-Tunisia

Gained hands-on experience in textile production, observing key manufacturing stages and industrial practices.

Projects

Prototype Automotive Seat Cover 2024

Developed prototype automotive seat cover textile using polyamide, polyester, and STOLL Jacquard knitting with double-layer spacer structure.

Composite Structure Optimization via Mechanical Testing

Evaluated three composite configurations using various mechanical tests to identify the optimal structure for strength and performance.

Grafting of Methyl Methacrylate onto Polyamide 6-6 and Polystyrene Emulsion/Solution Polymerization

Conducted grafting of methyl methacrylate onto polyamide 6-6 and performed polystyrene polymerization in emulsion/solution, analyzing resulting polymer properties.

Certificates

- certificate in Iso 9001 : 2015
- Certificate of participation " Workshop on the sustainable management of water resources in the textile Industries ‘’
- Programming in python

Skills

Open LCA /Simapro

Lectra

Python Programing

STOLL-M1 /Software

Office Tools

MATLAB /Minitab

Latex

Laboratory Testing
Universal Testing Machine, SiroFAST
